

FIELD. SYSTEM. ORBIT.

A comprehensive visual identity and asset creation system for a rider, digital product professional, web practitioner and future-focused technologist.

Version 3.0 / 23 September 2026

System map

The master reference for every digital and physical asset.

01	North Star	Brand idea, narrative and distinctiveness
02	Brand pillars	Rider, Nature, Future Tech, Space
03	Audience	How the brand should be experienced by different audiences
04	Brand voice	Writing, tone, claims and examples
05	Logo	AP mark, wordmark, clear space, applications
06	Colour	Core, field, orbital and signal colour modes
07	Typography	Font family, weights, hierarchy, numerals, editorial type
08	Iconography	Grid, stroke, family, usage and examples
09	Geometry	Planes, facets, terrain, machine and orbit motifs
10	Texture	Paper, print, material and digital surfaces
11	Photography	Rider, portrait, landscape and professional work
12	Illustration	Canonical geometric editorial realism
13	Composition	Hierarchy, focal points, crops and negative space
14	Layout	Grid, spacing, responsive and safe areas
15	Website	Homepage through Contact and 404
16	UI components	Buttons, cards, forms, tags, navigation
17	Case studies	Authentic screenshot + personal-brand frame
18	Social	LinkedIn, Instagram, Stories, carousels, announcements
19	Marketing	Campaigns, ads, email, OG, landing pages
20	Presentation	PPT / Keynote / pitch-deck system
21	Documents	Resume, proposal, report, one-pager
22	Print	Business card, poster, stationery, merchandise
23	Motion	Reels, transitions, kinetic typography, video grade
24	Data	Charts, diagrams, roadmaps and architecture
25	AI production	Master prompts, negatives, consistency controls
26	Asset specs	Dimensions, file formats, naming, export rules
27	Governance	QA, versioning, exceptions and approval
28	Examples	Reference templates for future creation

North Star

The brand becomes distinctive when the rider, the builder and the explorer are all visible.

CORE IDEA

Design clarity from complexity.

Aashish is not only a project manager or web professional. The brand should communicate a person who moves between people, systems, machines, environments and ideas.

SIGNATURE NARRATIVE

FIELD	SYSTEM	ORBIT
Rider / nature / movement	Product / technology / delivery	Future / space / imagination
Grounded	Precise	Possibility-driven
Human scale	Operational scale	Big-picture scale
Roads, mountains, foliage	Interfaces, diagrams, architecture	Stars, rings, signal lines
Emotion: freedom	Emotion: control	Emotion: curiosity

Rider principle

Riding is an ethos, not a motorcycle graphic. It represents movement, independence, exploration, endurance, respect for terrain and the willingness to take a route rather than simply follow one. Motorcycles should appear in personal storytelling and selected campaign imagery, not as a permanent logo motif.

Nature principle

Nature keeps the brand grounded. Mountains, roads, trees, weather, water and terrain provide colour, texture, scale and calm.

Future principle

Technology and space bring the system forward. Use orbital arcs, signal lines, technical labels and restrained cyan highlights as secondary devices - never as a neon sci-fi theme.

Brand pillars

Four energies guide the design without turning the site into a lifestyle brand.

Pillar	Core value	Visual expression	Where to use
RIDER	Movement	Independent, exploratory, decisive	Use in personal/editorial moments
NATURE	Groundedness	Organic, tactile, calm	Use in palette, photography and texture
FUTURE TECH	Precision	Systems, engineering, interfaces	Use in diagrams, UI and metadata
SPACE	Curiosity	Scale, possibility, long horizons	Use in orbital motifs and selected hero sections

ENERGY BUDGET

70% grounded core + 20% signature geometry + 10% future/experimental layer. This prevents the identity from becoming either a conventional portfolio or an over-stylized sci-fi concept.

Three visual modes

GROUND	Default personal brand	Night / Cream / Forest / Olive / Sky / Gold
ORBIT	Future-tech / systems	Void / Night / Sky / Orbit / Pale Blue
SIGNAL	Campaign accent	Ink / Cream / Gold / Ochre / rare Terracotta

Audience & brand experience

Different people should see the same person through different evidence.

Audience	Needs in < 30 sec	What the website should prove
Hiring manager	Fast proof	What has he shipped? What does he own? Can he communicate?
Senior PM / product lead	Depth	How does he structure complexity? What are his decisions?
Engineering stakeholder	Credibility	Does he understand technology and constraints?
Design stakeholder	Craft	Can he work with design systems and visual thinking?
Client / founder	Confidence	Will he reduce ambiguity and keep delivery moving?
Peer / community	Personality	What does he think about work, technology and the world?

The brand should therefore behave like an evidence-first editorial portfolio: identity first, proof second, personality third.

Brand voice & writing

The verbal identity should feel like an experienced practitioner, not a marketing department.

VOICE

Clear / calm / specific / intelligent / direct / slightly curious.

DO	DON'T	Example
State the work	Use vague self-praise	I coordinated the launch across design, dev, QA and client stakeholders.
Explain decisions	Hide behind buzzwords	We froze scope at the structure gate to protect the launch date.
Use evidence	Overclaim	The release reduced manual deployment steps.
Show personality	Turn everything into lifestyle content	A weekend ride taught me to plan for the route, not just the destination.
Own your contribution	Claim team output	I led delivery while engineering owned implementation.

Copy formula

Context -> decision -> action -> outcome -> learning. Use short paragraphs. Prefer concrete verbs: define, map, coordinate, ship, test, measure, simplify, de-risk, document.

Logo & AP monogram

The mark must be useful at 16 px and still feel authored at poster scale.

MASTER PRINCIPLES

Primary mark	Geometric AP monogram	Use for favicon, avatar, nav, watermark, merchandise
Wordmark	AASHISH PANDEY	Use on formal documents, decks, cover pages
Lockup	AP + wordmark	Use when identity needs explicit naming
Monochrome	Ink or Cream	Always maintain a single-colour master
Accent version	Gold or Orbit	Use sparingly for hero / campaign contexts

LOGO CLEAR SPACE

Minimum clear space = 1x the monogram height on all sides. Never place type or image detail inside that zone.

LOGO MISUSE

Never stretch, skew, bevel, outline, add gradients, rotate, add drop shadows, place in arbitrary badges, or combine with generic AI / circuit / mountain icons.

Colour system

The original nature-led palette remains the core. Futuristic colour is an accent layer.

CORE COLOURS

Ink	#202524	Primary text / structure
Night	#171B1A	Default site background / hero
Void	#101618	Deep orbital fields
Forest	#3E4A3D	Terrain / structural green
Deep Forest	#28352D	Large dark green fields
Olive	#77734B	Natural secondary plane
Moss	#65724D	Organic accent
Muted Gold	#B39A55	Signature accent / premium marker
Ochre	#9A843F	Warm secondary accent
Sand	#EEE4CF	Paper / light neutral
Cream	#F5F0E5	Light content field
Sky	#5E97AF	Signature environmental blue
Pale Blue	#8AAEBC	Soft cool surface
Slate	#5A7275	Metadata / secondary text
Terracotta	#B96540	Rare campaign heat
Orbit	#76B8C5	Future-tech accent
Lavender	#777594	Ultra-rare cosmic accent

USAGE MODES

Ground	Night / Cream / Forest / Olive / Sky / Gold	Most personal brand work
Orbit	Void / Night / Sky / Pale Blue / Orbit / Gold	Tech, systems, digital future
Signal	Ink / Cream / Gold / Ochre / Terracotta	Announcements, campaigns, print accents

Rule: choose one mode per asset. Do not mix Ground + Orbit + Signal equally in the same composition.

Typography system

Type should carry authority while staying neutral enough to let the artwork speak.

PRIMARY FAMILY - LATO

LATO BLACK / BOLD / SEMIBOLD / MEDIUM / REGULAR / ITALIC

Style	Weight	Desktop	Mobile	Typical role
Display XL	Black	64-88 px	42-56 px	Homepage hero / campaigns
Display L	Black	48-64 px	36-44 px	Page titles
H1	Bold	36-48 px	30-36 px	Primary section
H2	Bold	24-32 px	22-28 px	Secondary section
H3	Semibold	18-22 px	18-20 px	Cards / subsections
Body L	Regular	18 px	17 px	Long-form
Body	Regular	16 px	16 px	Default copy
Meta	Medium	11-13 px	11-12 px	Dates / roles / taxonomy
Micro	Bold	9-10 px	9-10 px	Eyebrows / labels
Technical	Mono	11-14 px	10-13 px	URLs / metrics / system notes

FONT STYLING RULES

Display: tight leading, slight negative tracking. Body: generous leading, neutral colour. Meta: uppercase with tracking. Technical: monospace for evidence, not decoration. Use at most two weights within a single block.

Type styling examples

These examples are reusable patterns, not decorative specimens.

Pattern	Example	Style
HERO	AASHISH PANDEY.	Lato Black / 72 px / tight leading / Cream + outline
EDITORIAL	THINGS I'VE SHIPPED	Lato Black / 56 px / 0.96 leading
SECTION	02 / DELIVERY SYSTEM	Lato Bold / 10 px / uppercase / Mono metadata nearby
BODY	Complex digital work becomes manageable when the problem, ownership and decision path are visible.	Lato Regular / 17 px / 1.55
METRIC	35+	Lato Black / 56 px / tabular numerals / Gold label
TECHNICAL	SHOPIFY / WP-CLI / CI-CD	JetBrains Mono / 11 px / tracking

Copy hierarchy example

CASE STUDY

LIQUID I.V. / GLOBAL D2C

A complex multi-market commerce experience translated into a clearer delivery system.

ROLE / PROJECT MANAGEMENT + DIGITAL DELIVERY

Iconography

A custom geometric family creates continuity between product thinking and illustration.

BASE RULES

24 x 24 grid / 1.5 px default stroke / sharp terminals / generous negative space / mostly one colour.

				
Arrow	Chevron	External	Plus	Close
				
Search	Menu	Link	Play	Check
				
Location	Calendar	Code	Layers	Globe

Property	Rule
Stroke	1.5 px default; 2 px emphasis
Grid	24 x 24 master
Corners	0-2 px; sharp wherever possible
Filled icons	Only high-emphasis action or active state
Colour	Ink by default; Gold / Sky / Orbit for active states
UI sizes	16 / 20 / 24 px
Touch target	44 x 44 px minimum
Style	Do not mix with unrelated icon libraries in the same experience

Iconography by context

The same family adapts to different subjects without becoming literal illustration.

Context	Recommended icon language	Examples
Product / PM	Routes, layers, check, calendar	Roadmap, delivery, milestones
Technology	Code, layers, link, server-like boxes	Architecture, integrations
Design	Grid, cursor, shape, crop	Wireframes, components
Nature / rider	Route line, compass, location, road	Field notes, travel
Space / future	Orbit ring, node, signal, star point	Concepts, systems, future notes
Utility	Search, menu, close, external	Navigation and controls

Do not draw a motorcycle icon and use it as a generic brand icon. The rider identity should primarily appear through photography, narrative and selected editorial art.

Geometry language

The geometric system now has two layers: terrestrial and orbital.

TERRESTRIAL GEOMETRY

Plane	Large 4-8 sided polygon	Terrain, sky, architecture, major colour fields
Facet	Medium polygon	Face, clothing, product surfaces
Shard	Small polygon	Detail only where necessary
Cut	Negative wedge	Separation / motion / crop
Frame	Edge crop	Full-bleed editorial energy

ORBITAL GEOMETRY

Orbit arc	Partial circular line	Future / space / systems
Node	Single point / circle	Connection / signal
Ring	Thin circular fragment	Emphasis / visual anchor
Trajectory	Curved or angled line	Movement / route / process

Orbital geometry is secondary. Keep it under roughly 10-15% of visible visual complexity.

Composition system

Good composition is the difference between geometric craft and geometric noise.

HIERARCHY

01 focal subject or message -> 02 supporting environment -> 03 directional geometry -> 04 micro detail.

Layer	Typical share	Question
Primary	45-65%	What should be seen first?
Secondary	25-40%	What gives context?
Accent	5-10%	What creates energy?
Micro	0-5%	What rewards close inspection?

SIGNATURE FLOW

Top frame -> environment -> subject -> foreground anchor -> edge crop. On vertical mobile artwork, read from top to bottom. On desktop, create one strong diagonal or directional relationship.

Texture & materiality

Texture creates tactility; it should never become visual noise.

Layer	Intensity	Rule
Paper grain	4-10%	Visible on close inspection, not dominant
Ink / print variation	2-5%	Subtle tonal irregularity
Surface roughness	2-6%	Use on editorial art / posters only
Graphic shadow	10-30%	Angular planes, not glossy 3D
Highlight	5-15%	Selective and material-aware
Digital noise	0-2%	Only where it mimics physical material

Avoid: heavy film grain, chromatic aberration, lens flares, glossy plastic highlights, glassmorphism textures, random AI noise and fake 3D bevels.

Photography direction

Use real photographs for truth and geometric art for signature.

Subject	Direction
Professional portrait	Natural light, neutral expression, strong crop, uncluttered background
Rider portrait	Movement, road context, helmet / bike where relevant, environment as story
Nature	Mountains, road, trees, water, weather, scale
Work photography	Desk, workshop, screen, whiteboard, device, real artifacts
Social lifestyle	Keep personal images curated; avoid generic influencer look

Rider framing

Use wide environmental frames for freedom, medium frames for story, and close portraits for human connection. Avoid making every image a motorcycle shot.

Colour grade

Protect natural skin tone. Pull shadows toward Ink / Forest, highlights toward Sand / Cream, and allow Sky / Gold to emerge naturally from the environment.

Illustration system

The geometric artwork is the most distinctive visual asset family.

CANONICAL STYLE

Geometric editorial realism. Large low-poly / cubist planes, controlled facets, tactile paper, natural colour, cinematic depth and accurate human / object identity.

Keep	Discard
Recognizable person / object	Generic replacement subject
Large coherent facets	Thousands of random triangles
Natural light translated to planes	Plastic CGI highlights
Environmental storytelling	Flat generic background
Paper texture	Heavy digital noise
Purposeful crop	Accidental clipping

AI illustration prompt system

The visual language is repeatable because the prompt structure is repeatable.

MASTER PROMPT ORDER

Reference fidelity -> subject -> identity -> pose -> environment -> composition -> geometric construction -> material -> palette -> lighting -> output -> negative constraints.

MASTER TEMPLATE

Use the supplied reference as the source of truth. Preserve the subject's identity, anatomy, pose, wardrobe and object relationships. Recompose into [FORMAT] using premium geometric editorial realism: large coherent planes, medium facets and a small number of purposeful shards. Add tactile paper texture, restrained print imperfections, cinematic depth, natural light translated into graphic planes and the Aashish Pandey palette. Use [GROUND / ORBIT / SIGNAL] mode. Keep [CRITICAL DETAILS] recognizable. Do not invent logos, UI, anatomy, text, people or objects.

NEGATIVE PROMPT

No photorealism, generic 3D, plastic CGI, cartoon anatomy, random tiny shards, excessive fragmentation, altered identity, altered pose, extra limbs, fake logos, fake website UI, neon cyberpunk, excessive glow, lens flare, watermark, decorative text.

Website design language

The website is the calm operating system around the expressive brand.

PRINCIPLE

Let the work be loud. Let the interface be quiet.

Element	Default
Background	Night / Cream / Sand
Navigation	Minimal, typographic, strong alignment
Cards	Flat, 0-4 px radius, subtle border
Buttons	Rectangular / lightly rounded
Dividers	1 px neutral or gold
Motion	Measured and purposeful
Artwork	Full-bleed or framed editorial
Metadata	JetBrains Mono

The current technical implementation already uses a React/Vite structure with routed pages for Home, Work, Work Detail, About, Writing, Writing Detail and Contact, so preserve that architecture while upgrading the design system.

Homepage - end-to-end

The first screen establishes the person; the rest proves the work.

SECTION 01 / HERO

Preferred content architecture:

Eyebrow	PRODUCT / PROJECT / WEB	Small mono metadata
Headline	AASHISH PANDEY.	Large display typography
Positioning	I turn complex digital work into things that actually ship.	Short, memorable
Support	Project management / digital products / web engineering / D2C	Metadata
Hero image	Geometric personal artwork	Signature visual
CTA	View work / Let's talk	Simple

SECTION 02 / PROOF

Show only defensible numbers. Prefer 2-4 high-signal facts over a wall of statistics.

SECTION 03 / THINGS I'VE SHIPPED

Large visual case-study cards with authentic screenshots or real artifacts. This should be the strongest proof section.

SECTION 04 / FIELD / SYSTEM / ORBIT

Explain the intersection of movement, technology, design and delivery without turning the site into a lifestyle blog.

SECTION 05 / WRITING + CONTACT

End with thought leadership and a simple route to action.

Homepage visual example

A visual grammar reference for the hero and first scroll.

AASHISH PANDEY.

PRODUCT / PROJECT / WEB / D2C

I turn complex digital work into things that actually ship.

The geometric image should interact with the typography, but never obscure the face or critical subject details.

Work page

The project index should feel like an archive of shipped work.

HEADER

THINGS I'VE SHIPPED

Real work. Real constraints. Real delivery.

PROJECT ROW

01	LIQUID I.V.	Global D2C / Digital Delivery / Shopify
02	MAGNUM	Global Corporate Digital Experience
03	WIPRO	Consumer Lighting / Appliances
04	CEAT SPECIALTY	Industrial / Product / Web
05	STRAVA	Product / Community / Fitness

Each project row should expose: number, title, client, role, year, category, one verified outcome and one strong image.

Case study system

Make the work feel like an editorial feature, not a CMS record.

SEQUENCE

01	Context	What was happening?
02	Challenge	What needed to change?
03	My role	What did I personally own?
04	Approach	How did I structure the work?
05	System	Design / content / technology / delivery
06	Evidence	Real screens / artifacts / diagrams
07	Outcome	Verified result
08	Learning	What changed in my thinking?

Case-study visual principle

60-75% real evidence / 25-40% personal-brand framing.

The brand controls the framing. The client UI stays truthful.

Case study banner - real screenshot rule

The screenshot is evidence. The frame is brand.

NON-NEGOTIABLE

Never fabricate a client website screenshot. Use an actual screenshot captured from the live site, a supplied screenshot, or clearly labelled reconstruction. If neither exists, use a neutral placeholder.

Layer 01	Actual screenshot	Do not alter interface truth
Layer 02	Device/browser frame	Consistent personal-brand container
Layer 03	Geometric field	Personal-brand expression
Layer 04	Metadata	Project / client / role / year
Layer 05	Outcome	Verified only

Never redraw a client's site and present it as a screenshot. The geometric treatment belongs around the evidence, not inside the evidence.

About page

The About page should explain the hybrid, not repeat the resume.

OPENING

I work between PRODUCT, DESIGN, TECHNOLOGY and DELIVERY.

Then explain the trajectory using real career information:

Layer	Recommended treatment
Identity	Large geometric portrait / real portrait
Career	Timeline with short evidence-based entries
Capabilities	Grouped systems, not giant skill clouds
Personal	Rider / nature / technology / space in a restrained 'Field Notes' area
Contact	Clear path to conversation

Writing system

The writing section builds intellectual credibility.

TITLE

FROM THE FIELD

Practical writing on project management, web delivery, technology, SEO, systems and the lessons that emerge outside the roadmap.

ARTICLE LIST

DATE	CATEGORY	TITLE	READ
23 SEP 2026	SYSTEMS	How to turn a vague brief into an executable plan	6 min
18 SEP 2026	WEB	What I learned from shipping across CMS stacks	7 min
12 SEP 2026	FIELD NOTE	What riding taught me about route planning	4 min

Personal writing should feel connected to the brand through the Field Notes framing, not through forced metaphors in every article.

Social media system

Every social asset should look native to its platform while still carrying the same visual DNA.

Type	Use	Visual formula
Project reveal	LinkedIn / Instagram	Real screenshot or artifact + geometric frame + one outcome
Insight post	LinkedIn	Large sentence + evidence + small geometry
Carousel	LinkedIn / Instagram	1 idea per slide, numbered system
Field note	Instagram / Stories	Rider / nature image + short reflection
Metric	LinkedIn	One number + context + source
Announcement	All platforms	Clean headline + one hero image
Behind the work	Stories	Real process image + small metadata

Social rule: professional 80% / personal 20%. Rider, nature, technology and space should add dimension - not dilute the professional signal.

Social post templates - examples

These can be recreated in Figma, Canva, PowerPoint or code while keeping the same rules.

Template	Headline example	CTA
Project reveal	Shipped a new digital commerce experience.	View the case study
Insight	Good delivery starts before the sprint.	Read the note
Field note	The route is part of the plan.	See the field note
Metric	35+ sites. One delivery system.	See how it worked

Social carousel system

Make carousels read like a mini case study.

Slide	Content	Visual treatment
01	Hook	Large statement, minimal geometry
02	Problem	One diagram / one fact
03	Decision	Numbered system / route
04	Execution	Screenshot / artifact
05	Outcome	Metric or verified result
06	Learning	One sentence
07	CTA	Visit site / read case study

Carousel rule: one idea per slide. Never shrink a long paragraph just to fit.

Marketing & campaign system

The brand can support professional campaigns without becoming a generic agency identity.

Asset	Preferred composition	Typical output
Landing hero	Large work image + concise message + CTA	16:9 / responsive
LinkedIn banner	Headline + abstract geometric field	1584 x 396
OG image	Title + hero artwork + minimal metadata	1200 x 630
Email hero	Headline + one image / accent	1200 px source
Digital ad	One message + one image + CTA	Platform-specific
Poster	Large image / statement / metadata	A-series / 300 dpi

Campaign rule: one visual idea + one message + one action.

Presentation / pitch deck

A pitch deck should feel like the portfolio became a room.

Slide	Content	Treatment
01	Cover	One image + title
02	Context	3-5 facts
03	Problem	One statement
04	Approach	Diagram / process
05	Work	Large screenshot / artifact
06	System	Architecture / framework
07	Outcome	Evidence
08	Learning	Reflection
09	Closing	Next step / contact

Documents, proposals, resumes & reports

Formal material should inherit the identity without becoming a poster.

Element	Rule
Cover	Large title + small metadata + restrained geometric field
Header	Minimal; no corporate banner
Body	Readable type, generous line-height
Tables	Neutral grid + strong hierarchy
Callout	One key point in Sand / Sky / Forest
Metrics	Source and date where relevant
Footer	Title / version / page
Resume	Evidence-first, ATS-aware, visually calm

The resume should remain simpler than the website. The website is the brand experience; the resume is the evidence document.

Print & physical applications

The identity should survive paper, fabric, card stock and physical objects.

Application	Rule
Business card	Monogram + name + role / site
Stationery	Minimal, large whitespace
A4/A3 poster	Full-bleed artwork + micro metadata
Notebook	Monochrome AP or one geometric crop
Sticker	Simplified mark / geometric motif
Merch	Prefer one-colour or two-colour production
Bike / helmet	Use only the monogram or tiny geometric signal; never turn it into loud racing graphics

Rider identity - physical & digital

The rider dimension is important, but it should feel mature and editorial.

DO

Use real road imagery, maps, coordinates, route lines, terrain shapes, field-note captions, weather, elevation or journey timestamps where genuinely relevant.

DON'T

Do not use generic racing stripes, flames, speed lines, skulls, racing-number graphics or motorcycle badges as brand shortcuts.

RIDER FIELD NOTE EXAMPLE

FIELD NOTE / 07

Pune -> Mountains

“The best route is rarely the straightest one. The work is similar: define the destination, understand the terrain, then choose a route the team can actually travel.”

Future-tech & space language

Use futurism as a layer of intelligence, not a visual theme park.

Use	Example
Orbit arc	Section divider / motion path / diagram
Node	System connection / integration
Signal line	Interaction / process / data flow
Star point	Tiny emphasis in editorial artwork
Void field	Hero background for technology stories
Orbit cyan	Active state or selected technical accent

Rule: space references should suggest scale, curiosity and systems thinking. They should not turn the brand into a science-fiction poster.

UI component system

All UI components should feel precise, quiet and slightly engineered.

Component	Default	Avoid
Button	Rectangular, 0-4 px radius	Pill buttons everywhere
Card	Flat, border, low shadow	Glassmorphism
Input	Simple border, visible focus	Decorative floating labels
Tag	Tiny uppercase text + subtle surface	Rainbow badges
Tooltip	Short, factual	Decorative popover
Modal	High-contrast, calm	Blur-heavy overlays
Divider	1 px rule	Ornamental separators

Interaction states

Default	Ink / neutral border
Hover	Small tonal shift or geometric reveal
Focus	2 px clearly visible focus treatment
Pressed	Shortened elevation / darker surface
Active	Gold rule, Sky or Orbit accent
Disabled	Reduced contrast but readable
Error	Terracotta / Red with clear text

Responsive system

Each viewport is a composition.

Format	Working logic
Desktop	12 columns / 24 px gutters / 1200-1280 px max
Tablet	8 columns / 20 px gutters
Mobile	4 columns / 16 px gutters
9:16	Subject first / top-bottom flow / safe zones
4:5	Strong focal crop / social feed
16:9	Editorial landscape / case study
1:1	Compact / avatar / campaign tile

Never rely on automatic cropping for important faces, products or text. Create deliberate crops.

Motion & video

The motion system should feel like geometry moving through space.

Motion	Default
Micro interaction	150-250 ms
Content transition	300-500 ms
Editorial reveal	600-900 ms if justified
Preferred effect	Plane reveal / geometric wipe / crop shift
Scroll	Limited parallax for depth
Kinetic type	Short and readable
Reduced motion	Respect user preference

Motion concept: field -> trajectory -> arrival. A line or plane can move with intention, like a route on a map or an orbit around a system.

Video / reel templates

A consistent structure for short-form professional content.

0-2 sec	Hook	Large statement + visual
2-5 sec	Context	One fact or problem
5-12 sec	Process	3 steps / screen / artifact
12-18 sec	Outcome	Metric or observable change
18-22 sec	Close	One insight + handle

Rider / field reel variant

Use real footage, road ambience, map line and one short reflection. Do not add aggressive speed graphics.

Data, diagrams & architecture

Technical thinking is part of the visual identity.

Diagram	Use
Timeline	Projects / phases / career
Flow	Process / ownership / approvals
Architecture	Systems / integrations / data
Matrix	Prioritization / decision framework
Map	Journey / route / geography
Chart	Metrics / trend / comparison

Style rules

No 3D charts. No decorative gradients. Use Ink for primary, Sky / Forest for supporting, Gold for emphasis, Orbit only for future-tech context. Label values directly. Cite source/date when data is external.

Utility assets

Small assets should be almost boring - until someone notices the details.

Favicon	Monochrome AP or simplified geometric mark
Email signature	Name / role / site / LinkedIn / tiny AP
OG image	Project title + hero image + minimal metadata
Avatar	Real portrait or simplified monogram
Loading	Subtle plane / route animation
404	404 + useful navigation + small geometric field

Do not use the full geometric artwork inside tiny utility assets. Simplify the visual language as the canvas shrinks.

Accessibility & inclusivity

Premium design includes readable design.

Contrast	Use sufficient text/background contrast; do not sacrifice readability for muted styling.
Focus	Visible focus state for keyboard users.
Motion	Respect prefers-reduced-motion.
Alt text	Describe meaningful image content; avoid decorative verbosity.
Touch	Minimum 44 x 44 px target.
Typography	Do not use tiny uppercase body copy.
Colour	Never use colour alone to communicate status.
Forms	Clear labels, errors and recovery guidance.

Asset production matrix

One identity, many outputs.

Channel	Asset	Output	Treatment
Website	Hero	16:9 / responsive	Geometric artwork + typography
Website	Case study	16:9 / 3:2	Real screenshot + branded frame
Website	About	4:5 / 3:4	Portrait / field image
LinkedIn	Project post	1:1 or 4:5	Screenshot + outcome
LinkedIn	Insight	1:1	Statement + evidence
Instagram	Carousel	1080 x 1080	One idea per slide
Instagram	Story	1080 x 1920	Field / project narrative
Email	Hero	1200 wide source	One message + image
Presentation	Slide	1920 x 1080	One idea per slide
Print	A4	210 x 297 mm	Editorial layout
Print	Poster	A2/A3/A4	Full-bleed geometric
Video	Reel	1080 x 1920	Hook -> context -> outcome
Utility	Favicon	16-48 px	Monochrome AP
Merch	Sticker	Vector	Simplified mark / motif

Export & technical specs

Design quality also depends on correct production settings.

Digital raster	PNG / WebP / AVIF	Use WebP/AVIF for web where supported; PNG for transparency.
Photo / artwork	sRGB	Preserve high-resolution master; export responsive derivatives.
Print raster	300 dpi	Include bleed where required.
Print vector	PDF / SVG / EPS	Prefer vector for logos and geometric art.
Video	H.264 / H.265 as platform allows	Keep high-quality master separately.
Logo	SVG + PDF	Keep vector master; export PNG only for utility use.
Social	Platform-native dimensions	Never stretch one master across all formats.

NAMING CONVENTION

Use: AP_asset_topic_variant_size_version.ext

Example: AP_case_liquidiv_banner_16x9_v01.webp

AI prompts by asset type

Use the same identity logic across every generation context.

Asset	Prompt emphasis
Hero artwork	Reference fidelity + geometric editorial realism + negative space for type + selected mode
Social artwork	One strong crop + headline-safe area + simple geometry
Portrait	Identity preservation + cinematic light + geometric treatment
Background	Large planes + paper texture + no distracting micro-detail
Diagram	Clean vector-like geometry + labelled flow + brand palette
Campaign	One visual idea + one message + one action
Motion frame	Plane trajectory + restrained type + selected accent

GLOBAL NEGATIVES

No fake logos, fake client UI, fake metrics, altered identity, generic faces, excessive neon, cyberpunk, glossy CGI, random polygons, decorative text, watermark.

Truth, evidence & content integrity

The personal brand is evidence-led. Visual polish must never outrun truth.

Client screenshot	Actual screenshot only, or clearly labelled mockup.
Metric	Verified and attributable.
Role	Describe what Aashish personally owned.
Outcome	Use measurable result only when defensible.
Technology	List what was actually used.
Logo	Use approved client logo only.
Quote	Use exact approved quote with attribution.
Award	Use documented award / source.

Before publishing a project asset, ask: What is evidence? What is interpretation? What is decoration? Keep the first two clear and the third subordinate.

Governance & versioning

Protect the identity from small inconsistencies becoming a new visual language.

v1.x	Token / component refinement	No change to core narrative
v2.x	Major visual adjustment	New type / logo / composition system
v3.0	Current master	Field / System / Orbit + complete asset system
Archive	Deprecated assets	Reference only

Exception rule

Client work may override brand colour, logo and UI where required. The personal brand still controls the framing, metadata, storytelling, evidence, typography around the work, and authenticity.

Asset QA checklist

A ten-minute review can prevent an inconsistent brand.

01	Truth	No fabricated UI, metric, quote or client evidence
02	Identity	Subject / person / object remains recognizable
03	Geometry	Large shapes are intentional
04	Hierarchy	One dominant focal point
05	Type	Correct family, weight and scale
06	Colour	One mode selected; accents restrained
07	Texture	Subtle, tactile, not noisy
08	Responsive	Crop works at target viewport
09	Accessibility	Contrast, focus and reduced motion
10	Brand fit	Would this sit naturally beside the other assets?

PUBLISH ONLY WHEN ALL TEN ARE SATISFIED.

Do / don't matrix

Use this as the fastest decision guide.

DO	DON'T
Use large coherent planes	Use random tiny polygons
Show real work	Use invented UI as evidence
Keep the UI quiet	Make every component visually loud
Let rider identity show through story	Turn the site into a motorcycle shop
Use nature as atmosphere	Use stock "mountain" clichés everywhere
Use space as a conceptual layer	Turn the brand into neon sci-fi
Use one accent	Use five competing accent colours
Use strong type	Use decorative display fonts
Use personal images selectively	Turn every section into lifestyle content
Use evidence	Use vague superlatives

Physical poster example

A premium print asset using the same geometric language.

FIELD NOTE / 07

THE ROUTE IS PART OF THE PLAN.

Pune -> mountains / rider study / 2026

Presentation cover example

Minimal enough for a boardroom, distinctive enough to feel personal.

01 / DIGITAL DELIVERY

FROM COMPLEXITY TO CLARITY.

Aashish Pandey / Project Management / Digital Products

The future-tech layer lives in the field, not in the body copy.

Social story example

The rider / nature side of the identity in a professional visual grammar.

Story example:

FIELD NOTE 07

A road teaches you to plan for changing terrain. Delivery work does the same. The route matters as much as the destination.

Case-study banner example

The surrounding frame can be expressive while the screenshot remains factual.

LIQUID I.V. / GLOBAL D2C

AUTHENTIC SCREENSHOT GOES HERE

Role	Project Management + Digital Delivery
Platform	Shopify / Web / Analytics
Evidence	Insert real screenshot / supplied capture
Outcome	Insert verified outcome only

One-page creative cheat sheet

A fast reference for yourself, a designer, developer, marketer or AI tool.

Brand	FIELD / SYSTEM / ORBIT
Spirit	Rider / nature / future tech / space
Look	Geometric editorial realism + quiet UI
Palette	Night / Cream / Forest / Sky / Gold + restrained Orbit
Type	Lato + JetBrains Mono
Geometry	Planes / facets / cuts / terrain / orbit
Texture	Paper / print / subtle grain
Photography	Real / cinematic / environmental / human
Website	Evidence-first editorial portfolio
Social	80% professional / 20% personal
Case studies	Real screenshot + branded frame
Motion	Trajectory / reveal / arrival
Rule	Authenticity before decoration

GROUNDING BY THE ROAD. BUILT FOR SYSTEMS. CURIOUS ABOUT THE FUTURE.

The rider provides movement. Nature provides grounding. Technology provides precision. Space provides perspective. Geometry turns all four into one visual language.

Aashish Pandey / Personal Brand Design System v3.0 / 23 September 2026

SHOW ME HOW TO USE IT.

A visual application book containing concrete examples for the Aashish Pandey FIELD / SYSTEM / ORBIT identity.

The visual recipe

A repeatable formula for creating almost any brand asset.

Real work / person / artifact	Nature / terrain / paper	Grid / type / metadata	Space / future / trajectory	Gold / warm accent
Dominant	Atmosphere	Structure	Curiosity	Emphasis

Example: a case-study banner uses an authentic project screenshot as SUBJECT, a geometric field as FIELD, metadata as SYSTEM, one subtle orbit arc as ORBIT, and gold only to emphasize the project number.

Colour combinations

Never use the palette as a list. Use it as working combinations.

Portfolio default	Night + Cream + Forest + Gold	Premium / grounded
Tech article	Void + Sky + Orbit + Cream	Technical / future
Rider field note	Forest + Sand + Sky + Gold	Exploratory / natural
Campaign	Ink + Cream + Ochre + Terracotta	Warm / editorial
Print poster	Cream + Ink + Forest + one accent	Tactile / timeless

Typography in real layouts

Typography is shown in context, not as a font specimen.

01 / PROJECT MANAGEMENT

TURN COMPLEXITY INTO CLARITY.

Project management / digital products / web delivery

A concise statement explains the value. Body copy stays short, readable and evidence-led.

LIQUID I.V. / GLOBAL D2C

ROLE / DIGITAL DELIVERY • 2026 • SHOPIFY

This is how a case study should feel: strong display, compact metadata, generous whitespace.

Typography do / don't

AASHISH PANDEY	Aashish Pandey!!!
02 / DELIVERY SYSTEM	DELIVERY SYSTEM DELIVERY SYSTEM
35+	35+ !!!
Project Management / Digital Delivery	PROJECT MANAGEMENT • DIGITAL • TECHNOLOGY • CREATIVE • INNOVATION • STRATEGY
Short paragraph with 2-4 lines.	Dense wall of text in a display font.

The brand becomes more premium by removing typographic noise, not by adding more styles.

Iconography in context

 Arrow	 Chevron	 External	 Plus	 Close
 Search	 Menu	 Link	 Play	 Check
 Location	 Calendar	 Code	 Layers	 Globe

Navigation	Menu / Search / Close	Utility only
Case study	Calendar / Code / Layers	Metadata
Process	Arrow / Check / Link	Flow
Field note	Location / Route	Personal / travel
Future tech	Orbit / Node / Signal	Secondary

Geometric composition: correct vs incorrect

3-5 large planes establish composition.	50 tiny triangles everywhere.
Face / object remains readable.	Facets destroy the silhouette.
Geometry supports the subject.	Geometry competes with the subject.
Negative space is intentional.	Every empty area is filled.
Paper texture is subtle.	Heavy noise makes it look dirty.
One accent plane.	Every polygon has a different colour.

Photo → geometric artwork

The transformation should stylize the rendering, not rewrite the person.

Identity	Plane construction
Pose	Colour grouping
Clothing	Lighting into facets
Motorcycle	Texture
Environment	Atmospheric depth

Website homepage / desktop

A real website application of the system.

Proof	2-4 verified metrics
Work	Authentic screenshots / artifacts
Personal	Field notes, rider / nature
Thinking	Writing
Action	Contact

Website / dark technical article

Use the ORBIT mode for technical essays, architecture breakdowns, engineering notes and future-facing work. The cyan should remain an accent, not a neon glow.

Mobile homepage / 9:16 behaviour

Artwork	Crop deliberately; never auto-cut the subject.
CTA	One primary action visible without clutter.
Navigation	Simple overlay / menu.

Work index

THINGS I'VE SHIPPED

02	MAGNUM	CORPORATE DIGITAL / DELIVERY
03	WIPRO	CONSUMER / WEB
04	CEAT SPECIALTY	INDUSTRIAL / WEB
05	STRAVA	PRODUCT / COMMUNITY

Hover example: title remains fixed; image shifts 8 px; a gold route line appears; metadata gains contrast; arrow moves 6 px.

Case-study banner / authentic screenshot

IMPORTANT: the central screen above is deliberately labelled as a placeholder. In production it must be replaced with the actual website screenshot. The surrounding geometry is where the personal brand is expressed.

Case-study section pattern

03 / CHALLENGE	What needed to change?
04 / MY ROLE	What did I own?
05 / APPROACH	How did I structure it?
06 / EVIDENCE	What can be shown?
07 / OUTCOME	What can be verified?
08 / LEARNING	What changed?

Use one visual proof element every 1-2 content sections: screenshot, diagram, timeline, architecture, wireframe, artifact or real photograph.

About page / hybrid identity

I WORK BETWEEN PRODUCT, DESIGN, TECHNOLOGY & DELIVERY.

Then use a compact timeline and a Field Notes section to introduce the rider / nature / technology / space dimension without diluting the professional story.

Writing / editorial

FROM THE FIELD

18 SEP	WEB	What shipping across CMS stacks taught me	7 MIN
12 SEP	FIELD NOTE	What riding taught me about route planning	4 MIN

FIELD NOTES

SYSTEM /

DELIVERY

Contact page

LET'S BUILD SOMETHING USEFUL.

	For web, eCommerce, CMS or delivery problems.	TELL ME THE PROBLEM

Use one calm form. No unnecessary fields. No fake submission state.

LinkedIn project post

Caption structure: 1-line hook → context → what I owned → one decision → verified result → link. Keep the graphic minimal; let the caption carry nuance.

LinkedIn insight post

GOOD DELIVERY STARTS BEFORE THE SPRINT.

Then three compact points:

01 / Define ownership.

02 / Freeze the right decisions.

03 / Make evidence visible.

Footer: AASHISH PANDEY / FIELD NOTE / 2026

Instagram / LinkedIn carousel

01 / THE PROBLEM

A brief becomes expensive when nobody agrees what “done” means.

02 / THE SYSTEM

Define scope, ownership, dependencies and evidence.

03 / THE ROUTE

Turn decisions into a sequence the team can actually travel.

04 / THE WORK

Show the real artifact / screenshot.

05 / THE OUTCOME

Use a verified result.

06 / THE LEARNING

Capture what should change next time.

Instagram Story / field note

Story text example: “The road changes. The plan should know how to respond.”

Use real road / nature imagery. Add route metadata only when it is real.

Reel / short video

2-5s	CONTEXT	One fact
5-12s	SYSTEM	Three steps / screen captures
12-18s	PROOF	Artifact / outcome
18-22s	CLOSE	One learning + CTA

Motion vocabulary: plane reveal / route line / crop shift / type rise / orbit trace. Never use all five in one reel.

Open Graph / social preview

1200 × 630 source. Keep the project title readable at thumbnail size. Use one geometric field, one project image, one metadata line.

Email announcement

PROJECT SHIPPED

A NEW DIGITAL EXPERIENCE IS LIVE.

Short context. One image. One CTA. One supporting link. Avoid newsletter clutter.

Pitch deck

Cover → context → problem → system → evidence → outcome → learning → next step.

Resume / CV

AASHISH PANDEY

PROJECT MANAGER / DIGITAL PRODUCTS / WEB DELIVERY

EXPERIENCE	Company / Role / Date / Evidence
SELECTED WORK	Project / client / contribution / outcome
SKILLS	Grouped by capability, not a giant keyword cloud

Keep the resume more restrained than the website. No full-bleed artwork behind dense ATS content.

Proposal / SOW

PROJECT PROPOSAL

CLIENT / DATE / VERSION

02	SCOPE	What is included
03	DELIVERY	Phases / owners / approvals
04	DEPENDENCIES	Client inputs / access
05	TIMELINE	Milestones
06	COMMERCIALS	Fees / assumptions

A4 / A3 poster

FIELD NOTE / 07

THE ROUTE IS PART OF THE PLAN.

PUNE → MOUNTAINS / 2026 / RIDER STUDY

Business card / stationery

Front: identity. Back: practical contact information. Use uncoated / textured stock when possible to reinforce the tactile system.

Merchandise

Cap	Monochrome AP
Notebook	AP + small orbital arc
Sticker	Simplified AP + one facet
Bike decal	Tiny AP / route marker; no loud racing graphics
Helmet	Monochrome mark or single gold accent

The rider identity should feel like an independent design label, not motorcycle merchandise.

Route / map visual

Use route lines to represent movement in both physical and professional contexts. A road map can become a metaphor for project sequencing, but never force the metaphor into ordinary UI.

System architecture graphic

APPLICATION	Shopify / WordPress / Webflow
INTEGRATION	API / JSON / Analytics
DELIVERY	Git / CI-CD / QA
MEASUREMENT	GA4 / dashboards / outcomes

Use this as a diagram template; populate only with technologies actually used on the project.

Campaign family

HEADLINE	One strong thought
HERO	One real image / artifact
SIGNAL	One accent colour
PROOF	One fact / metric
ACTION	One CTA

Personal wallpaper

Use the geometric artwork full-bleed. No logo unless the wallpaper is specifically a brand asset. Preserve negative space for clock / widgets.

AI prompt: rider portrait

REFERENCE

Use the supplied photograph as the source of truth. Preserve identity, facial structure, expression, pose, clothing and motorcycle.

STYLE

Transform into premium geometric editorial realism: large coherent planes, controlled facets, tactile paper texture, natural cinematic light translated into graphic planes, Ground palette, environmental mountain setting, strong vertical composition.

NEGATIVE

No altered face, no extra limbs, no random fragmentation, no glossy CGI, no neon cyberpunk, no fake text, no watermark.

AI prompt: social campaign

Create a 4:5 editorial campaign visual for Aashish Pandey. One dominant geometric subject, strong negative space for headline, Ground palette, paper texture, Lato-like typographic-safe area, one muted gold accent, sophisticated modernist composition. Do not generate logos or UI. Keep the visual quiet enough for a short headline.

Use the same prompt structure for every campaign so the AI output remains part of the same identity.

AI prompt: website background

Create a wide abstract geometric environment inspired by mountain terrain, technical diagrams and orbital trajectories. Large planes, subtle paper texture, Sky / Forest / Cream / Gold palette, clear negative space on the left for white typography, no people, no objects, no text, no logos, no photorealism, no 3D.

Asset naming in practice

AP_home_hero_orbit_mobile_v02.webp	Mobile alternate
AP_case_liquidiv_banner_16x9_v01.webp	Case-study banner
AP_social_liquidiv_4x5_v01.jpg	Project social
AP_social_fieldnote_01_1x1_v02.jpg	Field note
AP_deck_delivery_cover_16x9_v03.pptx	Presentation
AP_print_fieldnote07_A3_v01.pdf	Poster

Before / after decision examples

Hero	Photo + gradient + centered text	Geometric image + strong type + negative space
Project card	Rounded white card + stock image	Editorial image + metadata + geometric frame
Social	Quote over random gradient	Statement + evidence + controlled geometry
Rider post	Motorcycle graphic everywhere	Real ride photo + Field Note
Tech post	Neon circuit board	Dark field + system diagram + Orbit accent
Space post	Galaxy background	Void field + restrained orbit line
Print	Many colours + effects	One mode + tactile material

12 ready-to-use composition recipes

02	Case study	70% screenshot / 20% frame / 10% metadata
03	Insight	65% type / 25% geometry / 10% metadata
04	Field note	70% photo / 20% caption / 10% route
05	Tech	55% diagram / 30% void / 10% type / 5% Orbit
06	Poster	55% artwork / 30% type / 10% metadata / 5% accent
07	Carousel	One message / one visual / one proof per slide
08	Deck	One idea / one visual / one decision
09	Resume	70% information / 20% hierarchy / 10% brand
10	Proposal	80% information / 15% geometry / 5% accent
11	Merch	90% mark / artwork simplicity / 10% detail
12	Wallpaper	90% artwork / 10% safe negative space

IF SOMEONE CAN'T RECREATE THE ASSET FROM THE GUIDELINES, THE GUIDELINES AREN'T FINISHED.

This atlas exists to make the identity operational: a designer, developer, marketer, printer or AI tool should be able to take the rules and produce a new asset without guessing what “Aashish Pandey” looks like.
